Dear Mr. Speziale,

I have been contacted by Bill Stanwyck about the issues concerning making his weather reporting system available at the Saratoga County Airport. We use his SAI Weather Advisor here at the Tri-Cities Airport and find it very useful for several reason. Our tenant/pilots use it on a regular basis. Our student pilots in our flight school have maximum wind requirements and can access that info via our website www.GoodrichAviation.com to tell whether or not they can fly. Weather information is critical to making good flying decisions and a pilot can never get to much. Having actual weather info from the local airport instead of a larger airport from several miles away can only make flying safer. I like and feel comfortable with the SAI system because it take its information from a FAA certified automated weather observation system (AWOS) and presents it in a clear, understandable way. I can then link that info to my website for everyone to benefit from it.

I would recommend using Mr. Stanwyck's system and making it available to your pilots.

Please contact me if you have any other questions.

Sincerely,

Doug Goodrich
